

**We keep your water
clean in the
greenhouse!**

We are a technical company with over 30 years experience in designing and realizing of water purification solutions. The horticultural sector in the Netherlands and Flanders need to confront the water quality challenges in order to comply with legislation.

Your partner for the complete solution for 30 years!

The integral approach of emission reduction of crop protection products and / or fertilizers are major challenges in the greenhouses. The sector is investigating which investments are necessary. By applying new techniques and the optimization of existing processes there are opportunities for cost savings.

Individually or collectively?

We can help you with making a decision. It is a fact that a collaboration offers many advantages, on the condition that there is taken care of the complete approach, which means crop protection products, fertilizers, as well as fungi etc. so that reusing the water flow becomes possible. Obviously, the disadvantages are the infrastructure, the process and the cost allocation.

Deacidification and exploitation of complete solutions

Verhoeve takes care. We aim for long term cooperations with our customers. We provide complete exploitation and financing advise regarding water solutions. We have experience with various contract forms.

Search for sustainable combinations !

We have knowledge and equipment of all well known techniques and we can apply these well. Verhoeve has its own laboratorium to test the waste waterflow. If you have any design questions, then we can test the water and provide a solution which we can realize ourselves:

Do you prefer collectively? Do the quick scan on verhoevemw.com!

Or rather a temporary solution?

Verhoeve Milieu & Water owns a (certified) treatmentunit for your waste water. Besides, we own several buffer tanks to increase your buffer capacity. We rent out installations and buffer tanks. If required with service and assistance. Do you drain the wastewater periodically at the moment? Ask us for a subscription for a temporary treatment plan!

- Reversed osmose, ozone, UV, hydrogen peroxide, filtration;
- Advanced oxidation, coagulation and flocculation;
- Recovery of nutrients;
- Recovery of heat;
- Reuse the water.
